Agriculture Sector Long term strategy- Kenya

NDC updating:

- Define the country's low **carbon development pathway** in the medium and long term planning framework for low emissions, climate development pathway (LTS)
 - Take stock of the **results** of the implementation of the current NDC,
 - Map out the adaptation and mitigation options
 - Identify the focus for enhanced action

The process:

- **Situational analysis:** Establishment of the status of the sector (baseline), assessment of current policies for low Carbon Development
- **Scenario Development:** modelling of the immediate and future impacts of climate change on the agriculture systems/value chains (Crops, Livestock, Fisheries)
- **The Agric. NDC update:** Develop actions and communicate to the Ministry of Environment for the Kenya NDC update

THANK YOU
